

Weekly Focus

Coronavirus scare may soften ECB's signals

Europe continues to move in the wrong direction at a rapid pace in relation to COVID-19 and now has more than 100,000 cases per day. Unfortunately, the US and Russia are also moving in the wrong direction again. India, Mexico and Brazil are moving in the right direction while the situation is under control in Asia and the Pacific. In the Nordics, Norway looks stable but there are a number of new cases in Denmark, Sweden and Finland. More worryingly in Europe, COVID-19 related hospitalisations and deaths are climbing higher (although still much lower than in the spring). We expect both to increase further over the coming weeks, as there is usually a lag between new cases and hospitalisations and eventually deaths rise as well. Politicians have started to tighten restrictions and since new cases have not come down, the bias is towards tighter restrictions at the moment. The October flash PMIs for the Eurozone showed a weakening trend in the service sector, which is most vulnerable to lockdown and widespread COVID-19 cases, but the manufacturing sector continues to hold up well due to strong demand from abroad.

The resurgence in the coronavirus pandemic and negative impact on the economy are raising calls for further policy support. While we do not expect new policy announcements from the ECB at next Thursday's meeting, it could well send dovish signals for a December decision to increase / extend PEPP. In our view further bond purchases will not solve the subdued inflation outlook conundrum, but low yields are instrumental for fiscal policies to support the economic rebound, *ECB Preview - PEPP is the signal - not the solution*, 22 October. At its meeting on Thursday morning Bank of Japan is likely to downgrade its GDP and inflation forecasts but we do not expect it to change its QQE with yield curve control policy. In the US discussions about a fiscal package are still ongoing with the Trump administration and the Democrats narrowing differences on the size of the package, but struggling to find a compromise.

China continues to deal with the virus quite well and sees continuing economic recovery. This week, Q3 GDP numbers together with retail sales and industrial production further underscored the growth in the economy. One of the reasons is the very few coronavirus cases as Chinese authorities keep a tight surveillance and control measures in place. In addition, they are providing a steady stimulus, both monetary and fiscal. The Chinese currency CNY has strengthened 7% against the USD since May.

Brexit talks have resumed after the EU and the UK agreed to intensify talks aiming at a deal in mid-November (which has been our base case for a while). Over the past few weeks, there have been many news stories citing anonymous government officials stating that talks are moving in the right direction and markets welcomed EU's chief negotiator Michel Barnier's comments that a deal is within reach. The main issues remain fisheries and level playing field conditions (a common understanding on corporate taxation, state aid, workers' rights, environmental standards etc.). EUR/GBP is now trading in the lower end of the recent 0.90-0.92 range but we do not think the cross will move below 0.90 until we get more positive signals that a deal is in sight.

Scandi market movers

- In **Denmark**, retail sales figures for September are due on Monday. Retail sales dipped slightly in August but have generally remained very solid in recent months. The restrictions reintroduced in September have probably put a damper on overall consumption, but the restrictions generally hit other parts of consumption than retail sales. Our *spending monitor* points to still high levels of retail spending in September, and October's figures are likely to be even better, as the holiday allowance payouts will be included.

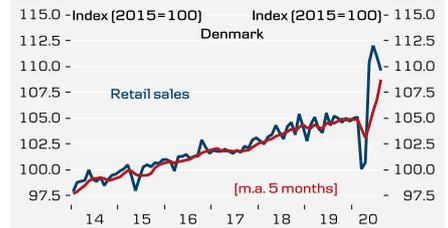

October's business confidence figures are due on Thursday, and the mood is likely to be considerably gloomier than in September, when most of the responses were collected prior to the latest restrictions being imposed. The restrictions will have hit the service sector particularly hard, so the grimmest feedback will likely come from this quarter, while the retail trade, in contrast, will presumably pull in the other direction.

The week closes with Statistics Denmark's property prices for August and unemployment figures for September. Based on property website 'Boligsiden's' figures and our own *viewings monitor*, there is nothing to indicate a slowdown in the housing race in recent months, so the August figures could very well produce new price records. We are also expecting improved unemployment figures despite the wage compensation schemes expiring in August. Daily jobless figures have not pointed to any increase in unemployment, and with last week's new record in employment growth in August, the labour market started off the month with considerable momentum. Nevertheless, the road to a full recovery in the labour market will be long and bumpy, though for now at least the trend is still upwards.

- Next week in **Sweden** offers September retails sales and NIER's October economic tendency survey. Retail sales have performed relatively well throughout the pandemic and this sector has fully recovered. During August, however, a small correction of sales volumes was seen, but this after sales volumes had risen for three consecutive months. We expect retail sales to increase but at a slower pace than seen during May-July. The risk here is that people are getting more nervous of being infected and act accordingly.

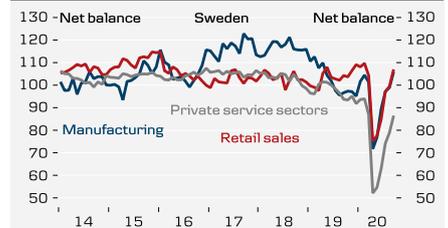

Regarding NIER, confidence in both retail trade and the manufacturing industry has risen to levels above the historical average, while private services are still lagging, nonetheless the rise in the past couple of months. COVID-19-hit consumer-related services continue to be weighed down, which was confirmed by the Riksbank's business survey published during the week. However, the virus situation remains uncertain, which probably will limit the upside near term. As said earlier, we believe that the verbal description of business conditions as expressed in the report is more informative than the exact numbers.

Can retail sales keep up the pace in the autumn?

Confidence in retail trade and manufacturing at levels above the historical average

Source: NIER, Macrobond Financial

- In **Norway**, the week brings retail sales data for September. There are signs that consumer spending dropped further after the fall in August, but we see this mainly as a correction after the surge over the three previous months. New travel restrictions and the closed border with Sweden triggered a fresh jump in retail sales in July and a sharp correction in the monthly data was inevitable as these effects normalise. Retail sales were still 8% higher in August than they were in February before the pandemic struck, which suggests that the decrease was not down to growing fears and reduced mobility. We expect a drop of 0.7% m/m in September. The decline in unemployment has begun to slow, due partly to most workplaces having reopened, but also to some industries having to lay off further staff over the summer. The weekly jobless numbers from NAV suggest that registered unemployment (full-time unemployed) fell marginally to 3.7% in October.

Retail sales falling from sky-high levels

Scandi Update

Denmark – New growth record in wage-earner employment

On Tuesday, the Danish Economic Councils released their autumn report on the Danish economy, which was considerably more upbeat than the spring report. They forecast GDP to decline this year by 3.6% but expect growth of 3.8% in 2021. Their estimates are a tad optimistic compared to our own expectations, particularly with respect to next year, when we doubt growth will be so strong given the ongoing challenges faced by the global economy.

Wage-earner employment again demonstrated robustness in August, when 15,000 new jobs were created – again a new record. The recovery since the spring has been pronounced, but we are still some way off the starting point in February. We expect the recovery in the labour market to continue, though presumably at a slightly slower pace, which is also indicated by the daily unemployment figures, where re-imposed restrictions and relief packages expiring appear to have put a damper on developments.

Consumer confidence improved a little, ticking up from -7.4 to -6.2. The sub-categories pulled in slightly different directions, as Danes’ expectations for their own finances were considerably higher, while expectations for the Danish economy as a whole dipped sharply. The former were likely pulled up by the recent holiday allowance payouts, which have boosted Danish household finances, and improving labour market conditions. The latter were presumably depressed by still rising infection rates, which are causing concern in Danish homes.

Sweden – Improving economy, improving budget balance

The Debt Office (DO) reduced its forecast for the borrowing 2020 requirement sharply, by SEK146bn, but very much in line with expectations. It left the 2021 forecast roughly unchanged. That said, DO does not seem to expect the favourable development to continue in Q4 and hence we see a possibility of a further reduction of the deficit. That implies a further reduction of primarily T-bills, but possibly also bond supply at a later stage.

Riksbank’s October business survey revealed a gradual improvement of businesses’ economic situation and expectations, although most still expect it will take more than nine months to get back to normal. The big exception, of course, is consumer services such as hotels, restaurants and travel agencies.

Statistics Sweden’s September business sales indicator showed a slowdown to 1% m/m sa (value terms), roughly half of the pace in the previous three months. This bolsters our case for a strong Q3 GDP rebound.

Sweden: DO reduced funding, more might come later

Norway – Moderate upswing in manufacturing

The Q3 business tendency survey confirmed a cautious upswing in manufacturing, with the industrial confidence indicator climbing from -9.6 to +1.7. The underlying data show a relatively strong upswing for producers of consumer goods. These firms mainly supply the domestic market, so this has to be seen in the light of the surge in consumer spending over the summer. Interestingly, producers of intermediates also reported a strong increase in activity. Since these are mainly in the traditional export industry, this is a clear sign that global industrial activity is on the up. On the other hand, activity remains low among producers of capital goods, which are dominated by firms supplying the oil sector. This confirms our expectation that activity in the oil service industry is set to decline due to a shortage of major development projects in the pipeline to replace those nearing completion.

Disclosures

This research report has been prepared by Danske Bank A/S ('Danske Bank'). The author of this research report is Chief Analyst Jakob Ekholt Christensen.

Analyst certification

Each research analyst responsible for the content of this research report certifies that the views expressed in the research report accurately reflect the research analyst's personal view about the financial instruments and issuers covered by the research report. Each responsible research analyst further certifies that no part of the compensation of the research analyst was, is or will be, directly or indirectly, related to the specific recommendations expressed in the research report.

Regulation

Danske Bank is authorised and subject to regulation by the Danish Financial Supervisory Authority and is subject to the rules and regulation of the relevant regulators in all other jurisdictions where it conducts business. Danske Bank is subject to limited regulation by the Financial Conduct Authority and the Prudential Regulation Authority (UK). Details on the extent of the regulation by the Financial Conduct Authority and the Prudential Regulation Authority are available from Danske Bank on request.

Danske Bank's research reports are prepared in accordance with the recommendations of the Danish Securities Dealers Association.

Conflicts of interest

Danske Bank has established procedures to prevent conflicts of interest and to ensure the provision of high-quality research based on research objectivity and independence. These procedures are documented in Danske Bank's research policies. Employees within Danske Bank's Research Departments have been instructed that any request that might impair the objectivity and independence of research shall be referred to Research Management and the Compliance Department. Danske Bank's Research Departments are organised independently from, and do not report to, other business areas within Danske Bank.

Research analysts are remunerated in part based on the overall profitability of Danske Bank, which includes investment banking revenues, but do not receive bonuses or other remuneration linked to specific corporate finance or debt capital transactions.

Financial models and/or methodology used in this research report

Calculations and presentations in this research report are based on standard econometric tools and methodology as well as publicly available statistics for each individual security, issuer and/or country. Documentation can be obtained from the authors on request.

Risk warning

Major risks connected with recommendations or opinions in this research report, including as sensitivity analysis of relevant assumptions, are stated throughout the text.

Date of first publication

See the front page of this research report for the date of first publication.

General disclaimer

This research report has been prepared by Danske Bank A/S. It is provided for informational purposes only and should not be considered investment advice. It does not constitute or form part of, and shall under no circumstances be considered as, an offer to sell or a solicitation of an offer to purchase or sell any relevant financial instruments (i.e. financial instruments mentioned herein or other financial instruments of any issuer mentioned herein and/or options, warrants, rights or other interests with respect to any such financial instruments) ('Relevant Financial Instruments').

The research report has been prepared independently and solely on the basis of publicly available information that Danske Bank considers to be reliable. While reasonable care has been taken to ensure that its contents are not untrue or misleading, no representation is made as to its accuracy or completeness and Danske Bank, its affiliates and subsidiaries accept no liability whatsoever for any direct or consequential loss, including without limitation any loss of profits, arising from reliance on this research report.

The opinions expressed herein are the opinions of the research analysts responsible for the research report and reflect their judgement as of the date hereof. These opinions are subject to change and Danske Bank does not undertake to notify any recipient of this research report of any such change nor of any other changes related to the information provided herein.

This research report is not intended for, and may not be redistributed to, retail customers in the United Kingdom or the United States.

This research report is protected by copyright and is intended solely for the designated addressee. It may not be reproduced or distributed, in whole or in part, by any recipient for any purpose without Danske Bank's prior written consent.

General disclaimer

This research has been prepared by Danske Bank A/S. It is provided for informational purposes only and should not be considered investment, legal or tax advice. It does not constitute or form part of, and shall under no circumstances be considered as, an offer to sell or a solicitation of an offer to purchase or sell any relevant financial instruments (i.e. financial instruments mentioned herein or other financial instruments of any issuer mentioned herein and/or options, warrants, rights or other interests with respect to any such financial instruments) [(‘Relevant Financial Instruments’).]

This research report has been prepared independently and solely on the basis of publicly available information that Danske Bank A/S considers to be reliable but Danske Bank A/S has not independently verified the contents hereof. While reasonable care has been taken to ensure that its contents are not untrue or misleading, no representation or warranty, express or implied, is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or reasonableness of the information, opinions and projections contained in this research report and Danske Bank A/S, its affiliates and subsidiaries accept no liability whatsoever for any direct or consequential loss, including without limitation any loss of profits, arising from reliance on this research report.

The opinions expressed herein are the opinions of the research analysts and reflect their opinion as of the date hereof. These opinions are subject to change and Danske Bank A/S does not undertake to notify any recipient of this research report of any such change nor of any other changes related to the information provided in this research report.

This research report is not intended for, and may not be redistributed to, retail customers in the United Kingdom (see separate disclaimer below) and retail customers in the European Economic Area as defined by Directive 2014/65/EU.

This research report is protected by copyright and is intended solely for the designated addressee. It may not be reproduced or distributed, in whole or in part, by any recipient for any purpose without Danske Bank A/S’s prior written consent.

Disclaimer related to distribution in the United States

This research report was created by Danske Bank A/S and is distributed in the United States by Danske Markets Inc., a U.S. registered broker-dealer and subsidiary of Danske Bank A/S, pursuant to SEC Rule 15a-6 and related interpretations issued by the U.S. Securities and Exchange Commission. The research report is intended for distribution in the United States solely to ‘U.S. institutional investors’ as defined in SEC Rule 15a-6. Danske Markets Inc. accepts responsibility for this research report in connection with distribution in the United States solely to ‘U.S. institutional investors’.

Danske Bank A/S is not subject to U.S. rules with regard to the preparation of research reports and the independence of research analysts. In addition, the research analysts of Danske Bank A/S who have prepared this research report are not registered or qualified as research analysts with the New York Stock Exchange or Financial Industry Regulatory Authority but satisfy the applicable requirements of a non-U.S. jurisdiction.

Any U.S. investor recipient of this research report who wishes to purchase or sell any Relevant Financial Instrument may do so only by contacting Danske Markets Inc. directly and should be aware that investing in non-U.S. financial instruments may entail certain risks. Financial instruments of non-U.S. issuers may not be registered with the U.S. Securities and Exchange Commission and may not be subject to the reporting and auditing standards of the U.S. Securities and Exchange Commission.

Disclaimer related to distribution in the United Kingdom

In the United Kingdom, this document is for distribution only to (I) persons who have professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the ‘Order’); (II) high net worth entities falling within article 49(2)(a) to (d) of the Order; or (III) persons who are an elective professional client or a per se professional client under Chapter 3 of the FCA Conduct of Business Sourcebook (all such persons together being referred to as ‘Relevant Persons’). In the United Kingdom, this document is directed only at Relevant Persons, and other persons should not act or rely on this document or any of its contents.

Disclaimer related to distribution in the European Economic Area

This document is being distributed to and is directed only at persons in member states of the European Economic Area (‘EEA’) who are ‘Qualified Investors’ within the meaning of Article 2(e) of the Prospectus Regulation (Regulation (EU) 2017/1129) (‘Qualified Investors’). Any person in the EEA who receives this document will be deemed to have represented and agreed that it is a Qualified Investor. Any such recipient will also be deemed to have represented and agreed that it has not received this document on behalf of persons in the EEA other than Qualified Investors or persons in the UK and member states (where equivalent legislation exists) for whom the investor has authority to make decisions on a wholly discretionary basis. Danske Bank A/S will rely on the truth and accuracy of the foregoing representations and agreements. Any person in the EEA who is not a Qualified Investor should not act or rely on this document or any of its contents.
