

Weekly Focus

US-China trade talks are the “name of the game”

Market movers ahead

- Trade talks between China and the US are the ‘name of the game’ next week, with the meeting taking place on 30-31 January.
- In the UK, the House of Commons is due to vote on Prime Minister Theresa May’s Brexit Plan B (and amendments) on Tuesday.
- The government shutdown may affect the US jobs report, while we do not expect the FOMC meeting to bring any new signals.
- In the euro area, we do not expect the Q4 GDP flash report to show any significant rebound from the lacklustre Q3 number.
- The euro area HICP inflation number for January is set to show a further decline to 1.3%, driven by lower energy prices.

Weekly wrap-up

- In the UK this week, Prime Minister May presented her Brexit Plan B on Tuesday, which, as expected, did not really provide any clarification.
- As expected, the ECB made no changes to its policy rate or forward guidance at its meeting this week and we still believe a rate hike in December is likely.
- Euro area PMI revealed further weakness, while the US counterpart painted a stronger picture of the US economy.
- Ahead of the crucial US-China trade talks next week, US Commerce Secretary Wilbur Ross said this week that while the two countries are still ‘miles away’ from a deal, he thinks there is a fair chance they will reach one eventually.

Market movers

Global

- In the **US**, parts of the federal government remain shutdown, which means the postponement of official data releases from federal agencies such as BEA and Census Bureau. An extension of the shutdown increases the risk that it will hurt the overall economy if it goes on long enough to shake consumer and business confidence. However, this is not our base case, as the loss in growth is likely to bounce back later assuming we get a deal soon.

Next week, the job reports, due out on Friday, is the most important release. We think average hourly earnings have risen +0.25% m/m in January, which means a fall in the annual growth rate from 3.2% to 3.1% y/y. We expect the unemployment rate to come in higher due to the shutdown, as we believe the household survey from which the unemployment rate is derived is likely to consider the furloughed workers as unemployed. For total payrolls, furloughed workers are counted as employed; however, due to the shutdown there might also be some noise in the total payroll number. We will keep an eye on private payrolls, which are unaffected.

Friday also brings the FOMC meeting. Recently, we have got more dovish signals from the Fed supporting it being on hold for now and likely until the June meeting. From now on Jerome Powell will hold a press conference after each meeting and as the Fed has not updated its projections, we do not expect any new signals.

- In the **euro area**, we have numerous interesting data releases ahead of us. On Thursday, we are due to get the Q4 euro area flash GDP growth numbers. In Q3, the euro area economy grew 0.2% q/q, the weakest growth rate since December 2014. Although temporary effects from German car sector bottlenecks explain some of the growth drag, the overall economic environment, with a Chinese slowdown, Brexit and fragile risk sentiment in financial markets, also weighs on growth prospects. In light of the latest months' disappointing industrial production data and falling sentiment indicators, we do not believe the euro area economy picked up speed in the past quarter; hence, we estimate the Q4 growth rate stayed at 0.2% q/q.
- Friday sees January HICP inflation numbers. Headline inflation took a dive in December, falling from 1.9% y/y to 1.6% y/y, driven mainly by falling oil prices, as core inflation remained flat at 1.0% y/y, which is a level it has been fluctuating around for the past year. We expect energy prices to continue the falling trend and therefore forecast that January's headline print will come in at 1.3% y/y, because we do not see scope for a rise in core inflation just yet. Rising wages are putting upward pressure on core inflation but we do not expect this to materialise until Q2 onwards (see also *Euro Area Research – Is the Phillips curve finally coming alive in 2019?*, 18 December 2018). On Wednesday, we expect the German inflation numbers to give us a glimpse of this.
- In the **UK**, the most important event is on Tuesday when the House of Commons votes on Prime Minister Theresa May's Brexit Plan B (and amendments). Many amendments have already been put forward (reflecting the many different views on Brexit among MPs) but it is the Speaker who decides which amendments to discuss and vote on. The vote is only indicative but if one, or more, of the amendments passes, it may force Prime Minister May to change her stance in one way or another. In particular, the amendment from Labour MP Yvette Cooper giving PM Theresa May until 26 February to put forward a new 'meaningful vote' is interesting, as it has a fair chance of passing. The amendment would also force May to ask for an Article 50 extension if the vote fails again.

Source: IHS Markit, Macrobond Financial

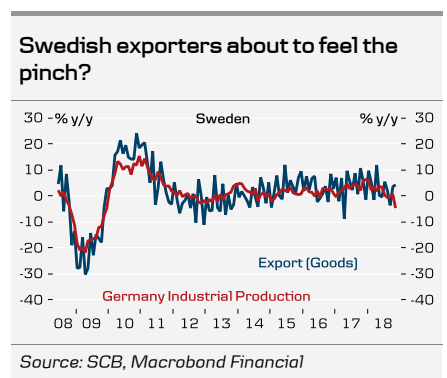

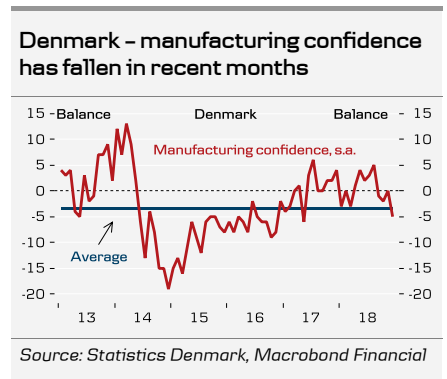

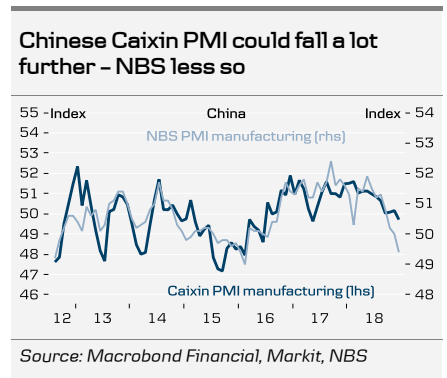

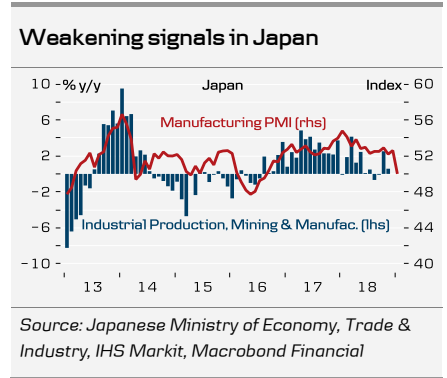

- In **Japan**, manufacturing PMIs weakened in January on the back of the Chinese slowdown. Exports also disappointed in December and it will be interesting to see whether industrial production confirms the current weakening picture. On Friday, we get both the unemployment rate and the jobs/applicants ratio for December. The labour market has actually loosened recently, with unemployment increasing to 2.5%. That said, the labour market remains historically tight in Japan.
- There are two important events in **China** next week. The first one is the top-level trade negotiations on 30-31 January. China's chief negotiator and Xi Jinping's top economic adviser Liu He will lead a Chinese delegation for talks, with a US delegation led by US Trade Representative Robert Lighthizer. In our view, the meetings will be key for reaching a trade deal. While we believe it is likely talks so far have focused on the 'easy parts' about how much and what China would buy more from the US, the meetings next week will move to the biggest knots surrounding Chinese industrial policy and protection of intellectual property rights. Once the meetings are over, we should have a good sense of how close we are to a deal. We cannot rule out seeing bumps in the road but eventually we expect the US and China to reach a trade deal, as failure to reach one would be likely to lead to big declines in equity markets and be a threat to the US economy in a year when the US Presidential election campaign begins.

The other important event out of China will be PMIs for January. We expect Caixin PMI manufacturing to fall further, as it has some catching up to do with other indicators that have shown more weakness. The official NBS PMI manufacturing has already fallen a lot, though, but we still see some downside risk in the short term before it reaches the bottom in Q1.

Scandi

- In **Denmark**, we have a busy week ahead, starting with December retail sales on Monday and continuing with the Nationalbank's foreign portfolio investments and securities statistics for December on Tuesday. Wednesday then brings business confidence for January. Sentiment was generally on the wane in H2 18 in every sector bar construction. The manufacturing indicator ended the year with another decline and a fourth successive month in negative territory, so it will be interesting to see whether things start to look up in 2019. After all, the economy has proven pretty resilient to the global slowdown to date. December unemployment numbers round off the week on Thursday. The number of people out of work has fallen as employment has risen but only slowly in the final months of 2018, suggesting there are still more people entering the labour market. The same picture can be seen with the jobless rate (number of unemployed as a percentage of the labour force), which has been stable at 3.9% since June.
- In **Sweden**, data next week amount to 'hard' December household lending and trade balance data on the one hand and 'soft' January surveys NIER confidence and manufacturing PMI. We estimate household lending has continued its gradual slowdown as the housing market has cooled down. It will also be of interest to us to see to what degree households continue to fix mortgage rates as seen over the past two months – at some point this may start affect ASW spreads (but we are probably far from that now).

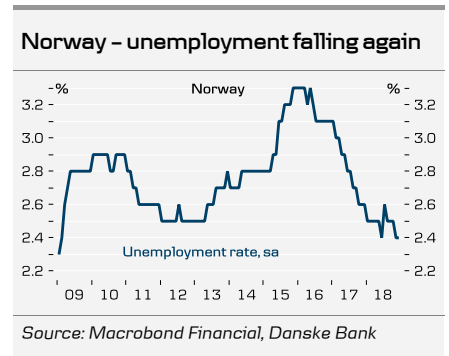

The trade balance is most interesting from the point of view of what happens to exports. As can be seen beside, Swedish 'real' exports are strongly correlated with German industrial production. A weak exports print would be a precursor for a bad print for December manufacturing production in the forthcoming week.

On this subject, the NIER and PMI surveys give mixed signals about the status for manufacturing. However, we believe the latter to be more accurate as it conforms better to hard data such as industrial production mentioned above. Actually, NIER manufacturing is to a certain degree driven by production expectations, probably giving a false signal. All other sectors have gradually grinded down to or below the long-term 100 average level, suggesting the growth party is over for now, possibly suggesting a ‘growth recession’. We recommend keeping an eye on NIER retail trade price expectations (especially the impact of the summer drought on food prices) and PMI employment, which has been on a steady decline for some time now.

The Riksbank’s Kerstin af Jochnick and Martin Flodén plan to speak about monetary policy on Monday and Tuesday.

- In **Norway**, changes to NAV’s methodology have made its jobless data harder to interpret since last summer but the sharp fall in December clearly suggests that the labour market is continuing to tighten. Growth in the labour supply due to better job opportunities, combined with mounting bottlenecks, means that unemployment is nevertheless unlikely to fall as far this year as it has in the past two years. Therefore, we expect the seasonally adjusted rate to be unchanged at 2.4% in January. We estimate retail sales fell 0.3% m/m in December on the back of a strong November. This is due primarily to problems with the seasonal adjustment to reflect the increase in Black Friday trading but also an expression of weak underlying spending growth towards the end of the year. The monthly PMI has had its thunder stolen somewhat by the confidence data just released by Statistics Norway. There are still clear signs that the oil-driven upswing in Norwegian manufacturing is continuing despite the global slowdown but we expect a moderate decrease in the PMI to 55.0 in January.

Weekly Wrap-Up

ECB: 'downside risks to euro area growth'

Main macro themes

- As expected, the ECB made no changes to its policy rate or forward guidance at its meeting this week. It will keep rates at 'present levels at least through the summer of 2019' and continue QE reinvestments past the first rate hike. **The most important change was that the ECB now acknowledges there are downside risks to growth but it does not change our call for a December hike** (see *ECB Review: Downside growth risks but rate hike still on track*, 24 January).
- In the UK **this week, Prime Minister Theresa May presented her Brexit Plan B** on Tuesday, which, as expected, did not really provide any clarification, as it looks pretty much like Plan A. The main problem with Brexit is that there is no majority for anything in the House of Commons besides a small majority that wants to avoid a no-deal Brexit at all cost. **We still believe the two most likely Brexit outcomes are either a 'decent Brexit' (May's deal or something very similar) or a second EU referendum.**
- The preliminary PMIs for January were released yesterday. In the euro area, the manufacturing index was at its lowest level since November 2014 and the service sector fell to its lowest level since August 2013. **Taken together, the euro area PMIs suggest growth of just 0.1% q/q in Q1.** In the US, the indices were solid, with the service indicator more or less unchanged and a small increase in the manufacturing index. While we think US domestic demand will be solid also this year, the manufacturing sector is not immune to what is going on globally.
- Ahead of the crucial US-China trade talks next week, US Commerce Secretary Wilbur Ross said this week that while the two countries are still 'miles away' from a deal, he thinks there is a fair chance they will reach one eventually. **We still assign a 75% probability of a trade deal no later than in Q2.**

Financial market developments

- It has been a quiet week in the financial markets. The US earnings season is in full swing**, as 20% of S&P 500 companies have reported. So far, earnings and revenue growth rates have surprised by 2.3% and 0.5%, respectively. Blended earnings growth is 11.7% as of today. If we exclude financials, the surprise factors are 3.5% and 0.9%, respectively. While revenue looks strong and actually surprising more than in an average earnings season, the opposite is the case for earnings. Overall, this is a slight disappointment but it seems that investors had feared even worse. **We remain positive on equities on the back of our positive macro outlook**, in which we see the slowdown bottoming out in Q2, but volatility has become more normal.
- EUR/GBP has continued to move lower** and is now trading below the 0.87 mark for the first time since November, when markets got a bit too excited about the prospect of a looming deal between the EU and Prime Minister May. While uncertainty related to Brexit remains high, we believe the risk of a no-deal Brexit has faded, as argued above. We believe the past week's rally in GBP is fair, given that the post-Brexit outcome distribution for EUR/GBP looks increasingly skewed on the downside.

Scandi update

Denmark – employment keeps on climbing

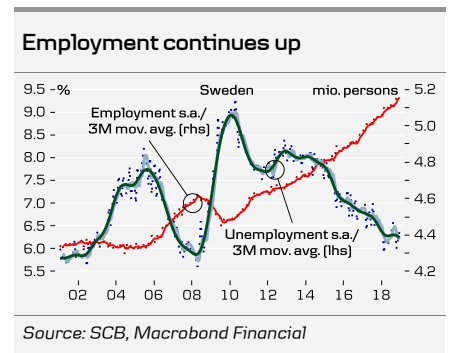

Statistics Denmark’s monthly employment data show an increase of 3,200 to a record-high 2,780,000 people in work in November. In our view, this is a healthy rise, albeit slightly below the average in 2018.

The week also brought new figures for consumer confidence, which fell steadily in H2 18 but rebounded slightly in January, with the indicator climbing from 2.9 to 3.9, due mainly to consumers’ view of their personal finances. It is odd that consumer confidence has declined at a time when employment and wages have been on the up and the economy has generally been in good shape. In contrast, the brouhaha about Brexit and the trade war between China and the US may have muddied the waters.

Sweden – unemployment stabilising, healthy job growth

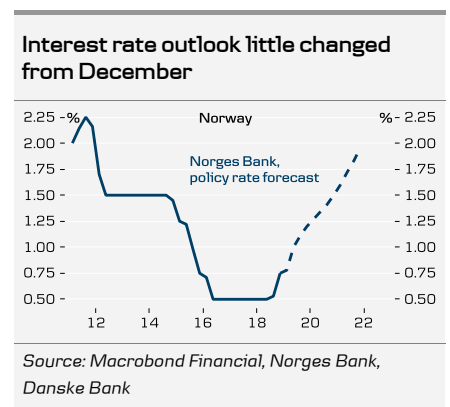

After a quiet week, December labour market data were released Thursday morning. Seasonally adjusted unemployment came in at 6.4%, up from 6.2% in the previous month. After multiple years of declining unemployment, we have the impression that data are now stabilising close to 6%. In the meantime, employment data remain very well behaved, rising at an annual pace of around 100,000 persons. We view this as impressive at a late stage of the cycle.

Norway – Norges Bank signals March rate hike

As expected, Norges Bank left interest rates alone at its meeting during the week but signalled fairly clearly that it intends to raise them at its meeting on 21 March: ‘The Executive Board’s assessment of the outlook and balance of risks implies a gradual increase in the policy rate. Global growth is a little weaker than projected and there continues to be considerable uncertainty surrounding developments ahead. In Norway, economic growth and labour market developments appear to be broadly as projected, while inflation has been slightly higher than expected. Overall, new information indicates that the outlook for the policy rate for the period ahead is little changed since the December Report.’

As expected, Norges Bank noted that global growth has slowed and that growth among Norway’s trading partners has been slightly weaker than assumed in December. Global interest rate expectations are also slightly weaker than then but still point to a gradual rise in interest rates. However, the bank noted that capacity utilisation in the Norwegian economy is still rising and is likely to keep on doing so. Core inflation is now close to target but the bank’s short-term model SAM suggests slightly higher inflation in December. More or less full capacity utilisation and the prospect of above-trend growth despite a global slowdown and above-target (core) inflation point to a continued gradual normalisation of monetary policy. The only thing we can see stopping a hike in March is a sharp correction in global financial markets and/or oil prices.

Disclosures

This research report has been prepared by Danske Bank A/S ('Danske Bank'). The author of this research report is Jakob Christensen, Chief Analyst.

Analyst certification

Each research analyst responsible for the content of this research report certifies that the views expressed in the research report accurately reflect the research analyst's personal view about the financial instruments and issuers covered by the research report. Each responsible research analyst further certifies that no part of the compensation of the research analyst was, is or will be, directly or indirectly, related to the specific recommendations expressed in the research report.

Regulation

Danske Bank is authorised and subject to regulation by the Danish Financial Supervisory Authority and is subject to the rules and regulation of the relevant regulators in all other jurisdictions where it conducts business. Danske Bank is subject to limited regulation by the Financial Conduct Authority and the Prudential Regulation Authority (UK). Details on the extent of the regulation by the Financial Conduct Authority and the Prudential Regulation Authority are available from Danske Bank on request.

Danske Bank's research reports are prepared in accordance with the recommendations of the Danish Securities Dealers Association.

Conflicts of interest

Danske Bank has established procedures to prevent conflicts of interest and to ensure the provision of high-quality research based on research objectivity and independence. These procedures are documented in Danske Bank's research policies. Employees within Danske Bank's Research Departments have been instructed that any request that might impair the objectivity and independence of research shall be referred to Research Management and the Compliance Department. Danske Bank's Research Departments are organised independently from, and do not report to, other business areas within Danske Bank.

Research analysts are remunerated in part based on the overall profitability of Danske Bank, which includes investment banking revenues, but do not receive bonuses or other remuneration linked to specific corporate finance or debt capital transactions.

Financial models and/or methodology used in this research report

Calculations and presentations in this research report are based on standard econometric tools and methodology as well as publicly available statistics for each individual security, issuer and/or country. Documentation can be obtained from the authors on request.

Risk warning

Major risks connected with recommendations or opinions in this research report, including as sensitivity analysis of relevant assumptions, are stated throughout the text.

Date of first publication

See the front page of this research report for the date of first publication.

General disclaimer

This research report has been prepared by Danske Bank (a division of Danske Bank A/S). It is provided for informational purposes only. It does not constitute or form part of, and shall under no circumstances be considered as, an offer to sell or a solicitation of an offer to purchase or sell any relevant financial instruments (i.e. financial instruments mentioned herein or other financial instruments of any issuer mentioned herein and/or options, warrants, rights or other interests with respect to any such financial instruments) ('Relevant Financial Instruments').

The research report has been prepared independently and solely on the basis of publicly available information that Danske Bank considers to be reliable. While reasonable care has been taken to ensure that its contents are not untrue or misleading, no representation is made as to its accuracy or completeness and Danske Bank, its affiliates and subsidiaries accept no liability whatsoever for any direct or consequential loss, including without limitation any loss of profits, arising from reliance on this research report.

The opinions expressed herein are the opinions of the research analysts responsible for the research report and reflect their judgement as of the date hereof. These opinions are subject to change and Danske Bank does not undertake to notify any recipient of this research report of any such change nor of any other changes related to the information provided herein.

This research report is not intended for, and may not be redistributed to, retail customers in the United Kingdom or the United States.

This research report is protected by copyright and is intended solely for the designated addressee. It may not be reproduced or distributed, in whole or in part, by any recipient for any purpose without Danske Bank's prior written consent.

Disclaimer related to distribution in the United States

This research report was created by Danske Bank A/S and is distributed in the United States by Danske Markets Inc., a U.S. registered broker-dealer and subsidiary of Danske Bank A/A, pursuant to SEC Rule 15a-6 and related interpretations issued by the U.S. Securities and Exchange Commission. The research report is intended for distribution in the United States solely to 'U.S. institutional investors' as defined in SEC Rule 15a-6. Danske Markets Inc. accepts responsibility for this research report in connection with distribution in the United States solely to 'U.S. institutional investors'.

Danske Bank is not subject to U.S. rules with regard to the preparation of research reports and the independence of research analysts. In addition, the research analysts of Danske Bank who have prepared this research report are not registered or qualified as research analysts with the NYSE or FINRA but satisfy the applicable requirements of a non-U.S. jurisdiction.

Any U.S. investor recipient of this research report who wishes to purchase or sell any Relevant Financial Instrument may do so only by contacting Danske Markets Inc. directly and should be aware that investing in non-U.S. financial instruments may entail certain risks. Financial instruments of non-U.S. issuers may not be registered with the U.S. Securities and Exchange Commission and may not be subject to the reporting and auditing standards of the U.S. Securities and Exchange Commission.
